

Dynamic Rose Genetics

**DRG** production is located in Deniliquin, the Riverina region of Southern New South Wales, Australia. There are 157 (**DRG**) varieties present in all of Western Europe, Russia, Lithuania, Sweden and Norway. In Australia 2018 twenty varieties were released with another nineteen to be released 2019. Roseraie Warren Millington was created and opened in the village of La Glanerie, Belgium 2018, dedicating the garden to one single rose breeder.

**DRG** breeding goals are to develop new varieties which have the character and charm of old garden roses of the past and of course to have the intoxicating perfumes. **DRG** roses are bred to be tough, tolerating yearly Summer temperatures exceeding 40 degrees celsius here in Australia and showing cold tolerance in Europe.
